

SMART WI-FI DOOR/WINDOW SENSOR

APP Name	Tuya Smart / Smart Life
Compatibility	Amazon Alexa / Google Assistance
Battery	AAA1.5V*2
Features	Low Battery Detection
	Door/Window Open/Close Detection

Product Details

- Enjoy Your Smart Life:** When you leave home, it will send you a notification message when a door / window is opened or closed, so that you can find intruders in time. Also, you can share the device with your family and keep track of the sensor activity history. You can detect the status of opening / closing doors / windows through the mobile app anytime, anywhere.
- Compatible with Alexa and Google Home:** Just use your voice to control devices connected through Google Home / Alexa. Other smart devices compatible with Smart Life or IFTTT can also be used for automatic control. Convenient for you to detect open/closed doors, windows, cabinets, drawers or anywhere you want to be notified.
- Easy to Install:** No complicated installation tools required. Simply attach the burglar alarm to the door / window, and the firm tape (included) helps you securely secure the access alarm remote somewhere. The Smart Life app can be downloaded from Google Play or App Store to add devices to make it easier to detect door / window status.
- Quick and Instant Alarm:** It can work with 2.4G Wi-Fi network. When the door or window is opened, an instant alarm notification will be sent to the phone via the APP within 3-10 seconds. Supports low battery detection. Helps improve family safety and child safety.
- Wide Range of Applications:** Smart doors and windows can be used to build smart automated security systems in homes or public areas, or work on their own. Powered by 2 AAA batteries, the standby time is up to 6 months.

FAQ

Is there a beep to alert you that a door has been opened?

This type of sensor does not include an internal alarm, only mobile phone app alarm notifications.

What if I require a siren?

You can purchase an indoor or outdoor siren, which can be linked through the app to sound alarms when your home is meant to be secured. Alternatively, your smart speaker can be programmed as a siren.

If the app is not working on my mobile phone, or my mobile phone does not have WIFI and 4G signals, will I receive a notification?

When the home Wi-Fi or the 3G/4G network connection of the mobile phone is not turned on, you will not receive an alert notification. However, the door/window sensor can be accessed through the app later on, to view records of when a door/window was opened or closed.

Other than a door or window, where else can I put this device?

This door and window alarm can be used in doors, windows, safe cases, drawers and other places where monitoring switches are needed.

Since this is a smart device, what else can I use it for?

This door / window sensor can be linked with other WIFI equipment to use as a trigger sensor for other Tuya smart devices. Such as open a door in the evening, to automatically switch on a smart bulb or a lamp connected to a smart plug. Routines can also be created so that your smart speaker, such as Alexa or Google Home, can inform the houseowner that a door has been opened.
