FAQ

General FAQ

If I did not purchase the Tuya Smart Home WiFi Wireless Zigbee Gateway Hub, will my switches still work?

Without the Tuya Smart Home WiFi Wireless Zigbee Gateway Hub, you can only still physically switch on or off your lighting or ceiling fan using the manual switch. The gateway hub opens up the possibility of remotely controlling the switches, as long as the home is connected to the internet.

I'm still unsure whether I need the gateway. What circumstances would the gateway be helpful?

Without the gateway, you cannot switch the lights/ceiling fan on or off, via the app, or through voice control. The switches will only operate manually.

I already have a smart home hub, do I still need to buy the Zigbee Gateway hub?

There are various smart home connected protocols, but as long as your existing hub has a Zigbee Protocol, it generally, should work without the need for a separate gateway hub from Imagine.
