

SMART FINGERPRINT DOOR HANDLE

Product Details

Smart Fingerprint Door Handle

This smart fingerprint lock replaces the single door lock knob available in most Bruneian houses. It works over Bluetooth, and can be used to save up to 200 unique fingerprints for quick access. When used together with the additional Bluetooth enabled WiFi hub, the door can also be controlled remotely, or through Amazon Alexa and Google Home by voice control.

Specs

Colour	Black
Material	Zinc alloy and stainless steel
Dimension	148mm x 25mm
System Requirement	Fingerprint + Tuya App (Bluetooth) + mechanical key + WiFi (using hub, through TLock app/Alexa/Google Home)
Battery	6V (4X AAA alkaline batteries)
Compatibility	Door thickness 35mm-55mm

FAQ

General FAQ

What apps can I use to control the smart door lock?

The smart door lock can be controlled either through the Tuya/Smart Life apps (for Bluetooth), or through the TLock app (for WiFi, when paired with the Bluetooth-WiFi hub).

If my internet connection signal at home does not reach my front door, can I still use the lock?

Because the lock has Bluetooth capabilities, up to 200 users can be granted access, even where there is no WiFi connectivity.

If I do not buy the Bluetooth-WiFi gateway, can I still remotely unlock my door?

Without the Bluetooth-WiFi gateway, you can only unlock the door remotely using Bluetooth, which requires the person unlocking the door via the app installed on their mobile phone to switch to be within 7 meters of the door.

Does the app register what time a registered user enter uses the smart door lock?

The app does register the name, time and date of the unique fingerprint used to unlock the smart door.
