

UNIFIED COMMUNICATION

VOICE & TELEPHONY (PABX)

Integrated Services Digital Network (ISDN) is a permanent connection that provides a reliable, variable speed alternative to dial-up. ISDN is widely used for professional audio and broadcast applications where digital clarity with integrated telephone services is specifically required.

SI business that often use two voice lines, such as phone and fax may prefer ISDN. ISDN is also an alternative choice for videoconferencing, or to remote networks other than the Internet.

imagine offers the following ISDN services

- Primary Rate Interface (PRI)
- Basic Rate Interface (BRI)

ISDN Primary Rate Interface (PRI)

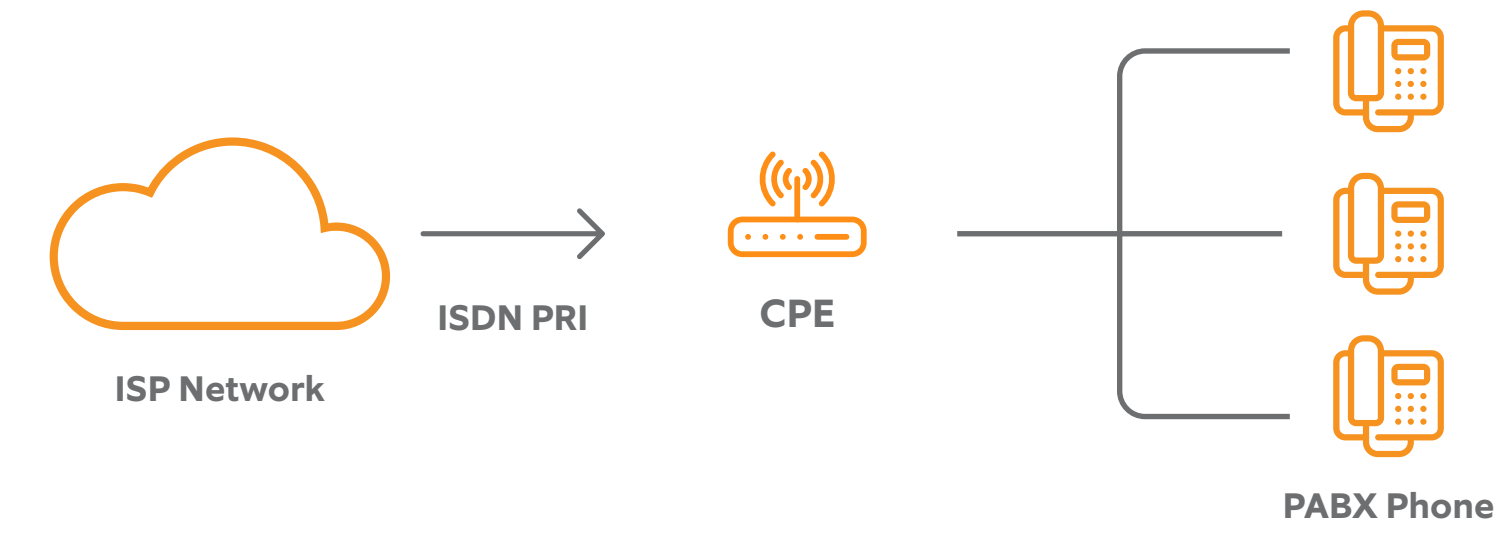

PRI is used to enable end-to-end digital connectivity for transmitting voice and data simultaneously. The PRI channels are typically used by medium to large enterprises with digital PBXs to provide them digital access to the Public Switched Telephone Network (PSTN)

The 30 B-channels can be used flexibly and reassigned when necessary to meet your needs. The Primary Rate user is connected directly to TelBru network.

Benefits

 Digital Transmission Improved Voice call quality	 Faster access DID provide callers direct access to internal extensions	 Cost-effective No additional telephone lines will be needed to serve the total call volume	 High Capacity A single Direct Inward Dialing (DID) connection can handle 30 simultaneous calls inward
---	---	---	--

How it works

FEATURES
Delivers 30 channels for 30 calls with a 2Mbps high-speed connection
Direct Inward Dialing
Pilot number

**Minimum contract term - One year*

ISDN Basic Rate Interface (BRI)

BRI lines offer the capability of voice, high-speed data and video transmission. BRI lines also allow you to take advantage of the 2B Data feature for video conferencing systems with ISDN-BRI interfaces.

The 2B Data feature allows one application (such as a desktop video system or a high-speed digital communications device) with data transfer rates up to 128kbps.

Benefits

 Help Increase Productivity Utilizes two separate 64 Kbps channels that can be combined into one 128 Kbps channel	 Clear, Digital Transmission results in few errors or re-transmissions and provides a highly reliable network – all of which can help increase productivity	 Productivity-Enhancing Applications Video-conferencing and digital broadcasting capabilities to reduce travel cost and development time
 Avoid Costs and Inflexibility of Dedicated Lines The same ISDN line can be used to carry both voice and data	 Faster Data Transmissions Speeds Result in quick connection times and low usage costs	 Disaster Recovery ISDN can be used in a large organization, ISDN may be provisioned for use as a disaster recovery backup

ISDN BRI is a two-wire digital subscriber line that provides the following features:

FEATURES
Two 64 Kbps bearer (B) channels used for voice, data and video; both B can be bonded providing a 128Kbps circuit
One 16 Kbps data (D) channel used as the signaling channel for call set-up and call-completion messages to support enhanced features such as caller ID and to carry low-bandwidth, packet switched data

Applicable with Biz Broadband (400GB plan & above) and Biz Mobile Bundle (10GB, 20GB or 30GB) only. Available at The Mall Gadong, Citis Square and Panaga Centres. While stocks last. Terms & conditions apply.

- Electronic Point of Sale (EPOS) is a combination of hardware and software that provides an efficient business operation.
- With an EPOS system, a store owner can process, track sales, and other procedures easier, and also get better understanding of their business performance.
- EPOS system not only records transactional information but can then generate detailed reports in response to the input data.
- This also gives more insight into businesses, allowing them to make actionable changes to increase revenue and cut costs.
- Some systems can be customised to include a number of features to improve business operations including loyalty reward schemes, staffing and inventory management and marketing facilities.

Features

Accessible Worldwide

Manage multiple stores, your products and team remotely. You don't need to be in-store as you will be able to manage everything online.

Product Management

Easily add in your product and start selling.

Promotions & Discounts

Give out exclusive promotions to your customers anytime.

Order

Manage your orders and refunds seamlessly.

Customer Management

Add in your customer details and get insights on their buying patterns.

Track Payments

Manage your team's shift easily and track payments such as Cash Bank Transfer, Online Payments etc.

Online Store

Now you can receive online orders from your customers via KedaiPOS webstore.

Barcode

Generate unique barcode for each of your product.

Benefits

Reach more customers

Your customers can enjoy your exclusive promotions easily.

Track Sales

Keep track of your business with our real-time reporting system for all your stores.

Quick & Easy

Quick setup, and ready to sell within a day.

More Systematic

View all your store vital data and transactions under one account.

Portable

Easy-to-carry, bring your POS outside your location anytime.

Receive online order

Accept online payment & receive order via SMS notification.

One-time upfront payment
